Phosphorus Solubilizing Bacteria	~60 billion/#

GUARANTEED MINIMUM ANALYSIS 0-0-12

Soluble Potash K ₂ O	12%
<i>derived from Humate and Kelp</i>	

DIRECTIONS FOR USE

Ideal pH: 6.5-7.0

Installations: Dilute 1 tsp. (enclosed pre-measured scoop) per gallon of water or fertilizer solution and apply as a soil drench for soil bio-stimulation, root growth stimulation, and stress recovery.

Ornamental beds and gardens: Dilute 1 scoop per gallon of water and spray foliage to point of runoff.

Sod and new turf seeding: Dilute 1 scoop per gallon of water and drench after sod installation or initial seed germination. Use 1 gallon (or 1 scoop) per 200 ft².

Storage: Bio-Magic will remain stable for 2 years in proper conditions. It contains live bacteria spores. Avoid excessive heat. Store in a cool place, away from direct sunlight and keep tightly sealed after use. Do not allow to freeze.

Notice: The buyer assumes all responsibility for safety and use not in accordance with this label. Read directions carefully. Keep out of reach of children. Avoid contact with eyes. Do not ingest.

Coverage: 1 lb contains 100 scoops and makes at least 100 gallons of Bio-Magic mix that can cover up to 32,000 ft² (¾ acre).
