

# **STRESS•X POWDER**

**(SOLUBLE SEAWEED EXTRACT)**

Reconstitutes into  
**LIQUID SEAWEED CONCENTRATE**

— ♦ —

STRESS-X POWDER is a pure extract of *Ascophylum Nodosum* seaweed harvested in the North Atlantic Ocean. Seaweed has been used in agriculture for thousands of years to promote the growth of healthy plants.

Makes over 500 gallons of ready-to-use liquid.

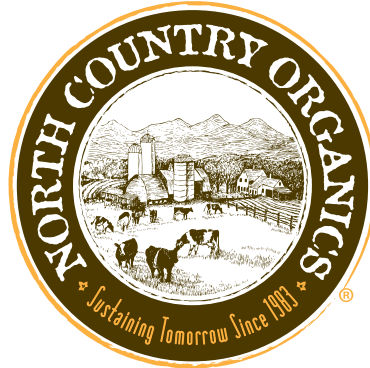

**Guaranteed Minimum Analysis**

SOLUBLE POTASH ( $K_2O$ ).....15%  
Derived from: Seaweed extract.

## **STRESS-X POWDER**

**(SOLUBLE SEAWEED EXTRACT)**

**Reconstitutes into  
LIQUID SEAWEED CONCENTRATE**

Seaweed contains natural substances that plants produce for themselves during periods of ideal growing conditions. However, when environmental conditions exist that are stressful to plants, the production of these compounds is inhibited. STRESS-X can provide these compounds to plants during stressful periods resulting in sustained growth and stronger plant defenses against pests. Seaweed has shown positive results in experiments with growth and development, germination, senescence, and root growth.

**GENERAL DILUTION RATE:** Mix one ounce of STRESS-X powder in 10 gallons of water. Start by dissolving the powder in warm water. When completely dissolved, add balance of water.

**TO USE:** Application rate and frequency vary depending on the climatic region, soil type, and fertility. In general, the maximum application frequency is once per week but may be applied as often as twice weekly during the most stressful part of the season.

Dilution rate may also vary. The general dilution rate of one ounce powder per ten gallons of water may be more or less concentrated depending on plant type and conditions. The more often STRESS-X is applied, the more effective the product will be. When in doubt, mix one level teaspoon of STRESS-X powder per gallon of water.
