

## Dry Soluble 80 Mixing Instructions

Our Black Earth Dry Soluble 80 is an entirely soluble product that dissolves readily in water to create liquid humic solutions. Due to the fine nature of the product certain methods of handling may produce undesirable results. For your convenience, we recommend the following hassle-free method to make liquid solutions:

Humic Acid Solution Concentration	Amount of Dry Soluble 80 Required
6%	0.65 lb/gallon of water or 77 g/litre of water
12%	1.3 lb/gallon of water or 154 g/litre of water

Following the diagram below, create a closed, air-free, circuit system. The vacuum created from water being pumped through the venturi will draw the Dry Soluble 80 at a slow, uniform rate from the dry handler to create the solution.

### Closed Circuit System (no air)

\*See venturi product page for more informaton.
